

## Mahjong Logic

<http://www.mahjonglogic.com>

01 December 2009

We have independently evaluated the output of the random number generator used by Mahjong Logic to verify it operated in such a way that it consistently produced random numbers. This evaluation should hold true in every instance and each number within the particular scaling interval tested should have an equal chance of being selected.

We examined numerous sample sets of data and performed recognised statistical tests on the data files generated by the random number generator.

Based on our review of the sample data, we confirm that the random number generator consistently selected numbers on a random basis.
